

Cover Letter - Product & Operations Lead at Docsity

Dear Hiring Team at Docsity,

I am excited to apply for the Product & Operations Lead position at Docsity. With over twelve years of experience in financial systems design, algorithmic trading, and fintech project management, I am confident in contributing to your product development and operational success.

I have led the architecture of a Python-based Decision Support System for real-time market-making and developed AI models for price trend forecasting. These projects, including my AI forecasting platform GravityWaves, showcase my ability to translate market data into actionable product features.

Currently based in Iran, I am preparing to relocate to Italy, where my sister lives in Turin, providing a stable foundation for smooth integration.

To provide clarity around my professional positioning, I offer the following overview of my candidacy:

Strengths	Weaknesses
Extensive experience in algorithmic trading and product design	Lack of fluency in Italian (currently learning)
Proven execution of AI-driven forecasting platforms	Residency outside Italy requiring relocation
Proficiency in Python, GitHub CLI, CI/CD automation	Limited work experience in European markets

Opportunities	Threats
Transfer of specialized insights from emerging markets	Visa process and potential onboarding delays
Family support in Turin enabling smooth transition	Initial limitations in local networking and integration
Contribution to Docsity's AI and data-oriented projects	Rapid adaptation expected within a dynamic work culture

Key strengths include extensive algorithmic trading experience, AI-driven platform execution, and proficiency in Python and CI/CD automation. I am actively learning Italian and eager to bring a global perspective and strategic leadership to your team.

Thank you for considering my application.

Sincerely,

Shakour Alishahi
